

Wenzel Downhole Tools Horizontal Directional Drilling (HDD) Motors

www.wenzeltools.com

The Wenzel Advantage

Since 1971, Wenzel Downhole Tools has become the leading motor and drilling tool supplier for oilfield, construction and environmental operations around the world.

Known for their operational longevity and efficiency, our tools are versatile to a wide range of drilling applications. Optimized design features and the pursuit of technological advancements ensure our tools offer exceptional performance, including operational longevity and reliability.

Horizontal Directional Drilling Motors

The Wenzel horizontal directional drilling (HDD) motor provides reliable performance for both straight and directional drilling within the oil and gas industry, as well as for civil construction applications requiring trenchless horizontal directional drilling.

As is the case with all of our tools, Wenzel motors are designed and built to our customer's specifications. Our HDD motor includes a fit-for-purpose driveline that shortens the overall length of the motor and a

large, custom-designed bit box mandrel developed specifically for our HDD customers. The motor features high weight-on-bit and load capacities and is compatible with all Wenzel fixed and adjustable bends.

We work closely with each of our customers to ensure our tools meet their specific needs and deliver the performance they expect.

Advanced Manufacturing

Our state-of-the-art manufacturing processes ensure our products are delivered on-time, built to spec and built to last.
